Ascarii

Interstoq Ltd. is a privately owned, independent wholesale and distribution business. We offer bespoke facilities to FMCG brand owners and distributors, assisting them in achieving sustainable growth and providing solutions to operational challenges.

Customer Challenges

- Our business is unique in its data requirements, meaning standard fields on most platforms were insufficient.
- Unable to track & report on fields we could input. They were only accessible in specific windows and not in broader reports/tables.
- The lack of visibility created unnecessary confusion, mistakes, and at the very least, a dip in our general working efficiency.

Solution

- We were experiencing difficulties with various software providers for many years and were looking for a platform that allowed a high level of bespoke functionality for quite some time.
- Boyum was showcased very early on during our initial SAP setup, and we found it solved our data entry woes.

Results

- We created multiple dashboards, user-defined fields, and reports that run from the data our team populated.
- A huge advantage is the ease of creating and managing a new field, perfect for the ever-changing modern environment.
- Once we completed the initial data entry, all fields are instantly available, in all the relevant areas of the business.

"EVERYTHING RUNS SEAMLESSLY, IT'S THAT SIMPLE. "

Jamie Milner / Director
