B1 Usability Package

FEATURED PARTNER

Sapphire Systems

Provider of heating control solutions and Smart Home systems, SALUS Controls Focus on forming strong customer relationships. Taking into consideration cost and efficiency when creating and manufacturing products. We provide simple to install and easy-to-use products to suit every budget and installation type.

Customer Challenges

- We faced difficulties validating data input and ensuring end users entered the correct data.
- User input errors causing the stock to be sold from the wrong warehouses.
- Lengthy repeatable user processes were an inefficient use of time, and user-defined fields were not always visible or incorrectly completed.

Solution

- To have the ability to tailor SAP Business One to our specific business requirements.
- Ability to build new features on the fly, using the Boyum Usability Package.

Results

- Inputting mistakes are dramatically reduced by validation.
- Automation saved time by reducing multiple-stage processes to a single click.
- Compared to SBO we find the search and the various report import/export functionality along with the UI customization function a massive improvement.

"WE NOW EXPERIENCE LESS MISTAKES AND QUICKER ORDER PROCESSING WHICH SAVES US TIME AND EFFORT AND THEREFORE MONEY"

Giles Hepworth / European IT Manager
