[www.feniks-meble.pl](http://www.feniks-meble.pl)

### INDUSTRY

Upholstered lounge furniture production

### EMPLOYEES

300

### BOYUM SOLUTIONS

Produmex Scan, Beas Manufacturing

### FEATURED PARTNER

SUPREMIS sp. z o.o.

Zakład Produkcji Mebli Feniks sp. z o.o. is based in Poland. The company is part of the Household and Institutional Furniture and Kitchen Cabinet Manufacturing Industry. They export their products to many European countries and have had the pleasure of presenting their collections on the domestic market since 2015. The company has a modern, innovative and comprehensive machine park that allows them to optimally use their production resources.

### Customer Challenges

- Lack of professional IT tools to administer production technology. Collectors were not used in the warehouses.
- Inability to efficiently administer production technologies.
- No possibility of creating complex, multi-variant production orders.
- Inability to quickly calculate the cost of manufacturing a finished product.

### Solution

- More accurate and faster preparation of appropriate offers (using the calculation of the finished product) for customers.
- Possibility of automated creation of production orders based on selections in the WG (finished product) configurator (variants, phantoms).
- Ability to edit the interface and create own scripts by more advanced users.
- Create own calculation templates using them for production accounting/quotation calculation.

### Results

- Sales department can enter sales orders into the system with the use of WG (finished product) configurators.
- Procurement department is able to obtain precise information about the material demand on the basis of created production orders for sales orders.
- Technology department can now collect and administer BoMs, routings, and production orders and quickly create calculations for finished and semi-finished products.

*"THE IMPLEMENTATION OF BEAS ALLOWED FOR MORE ACCURATE AND FASTER PREPARATION OF APPROPRIATE OFFERS (USING THE CALCULATION OF THE FINISHED PRODUCT) FOR CUSTOMERS."*

Maciej Huzarek / Project Manager
